Excel Mango KIM - Productivity Level 1 - In Stock

The In Stock tab (worksheet) in your Mango KIM Excel report is one of our favorites. Here you see each relevant Ace SKU that sold to zero on hand during the trailing twelve months (TTM). Note: stores new as of your first report run date so it will take a couple of months for this report to gain traction.

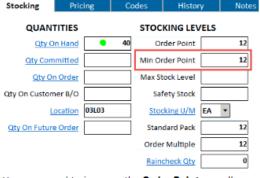

This worksheet is sorted by the most recent month a zero condition occurred (column R) and then by the best return (O: GMROI multiplied by K: Sales Opportunity) so you can use this report to process your follow up on any action (or inaction) for previous months.

■ Which SKUs are excluded from this listing?

■ VIDEO: steps to process this worksheet

Steps to process this worksheet:

- 1. Look at SKUs for the most recent month (column R), start with row 1 and work downward until you finish the month or hit your monthly budget (or get tired).
- 2. Increase the SKU's Min Order Point to the suggested amount (column M) Note: make sure there is enough space on the hook/bin otherwise you will create a back stock condition which tends to make In
- 3. Open Inventory Maintenance (IMU)
- 4. Type in a SKU from the In Stock report, press Display (F6)
- 5. Set the SKU's Min Order Point to the Suggested Min OP from the In Stock Report.

- 7. You may need to increase the Order Point as well.
- 8. In the top ribbon, click Change (F5)
- 9. If the SKU warrants more shelf space then make it.
- 10. Move onto the next SKU starting with Step 4.
- 11. **The training video above is more in depth and may help clear up questions.**
